

SW-YP-B150

New bottles made from Chemically Recycled PET!

Mail-friendly
with a capacity of 150mL and
a thickness of 25mm

Bottle shown : SW-YP-B150

Accessory shown : 15-415 CAPII (Scheduled for launch in November)

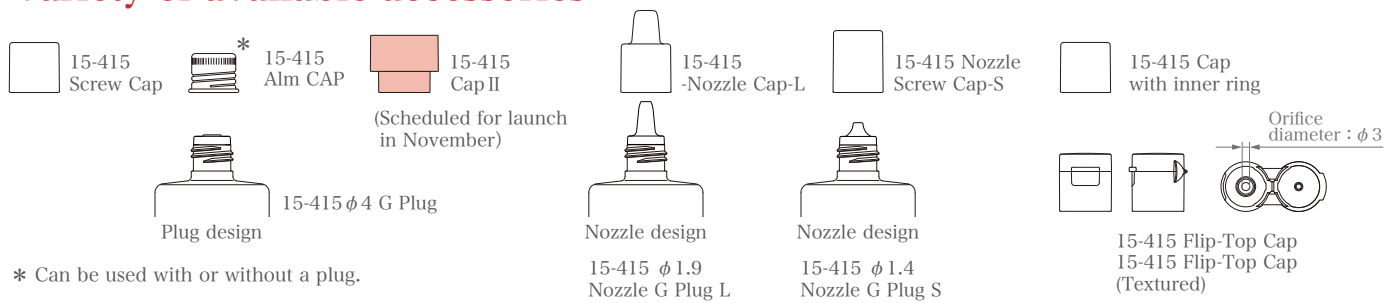

Introducing a new 25mm thick PET bottle that is ideal for sending through the mail. It has a capacity of 150mL and can be used for both retail products and samples. It is made from chemically recycled materials and the PET material gives it a glossy and transparent appearance. It is recommended for skin care, hair care and men's cosmetics.

SW-YP-B150

Recycled PET bottle with a distinctive and beautiful ribbed design!

Variety of available accessories

Sustainable Materials

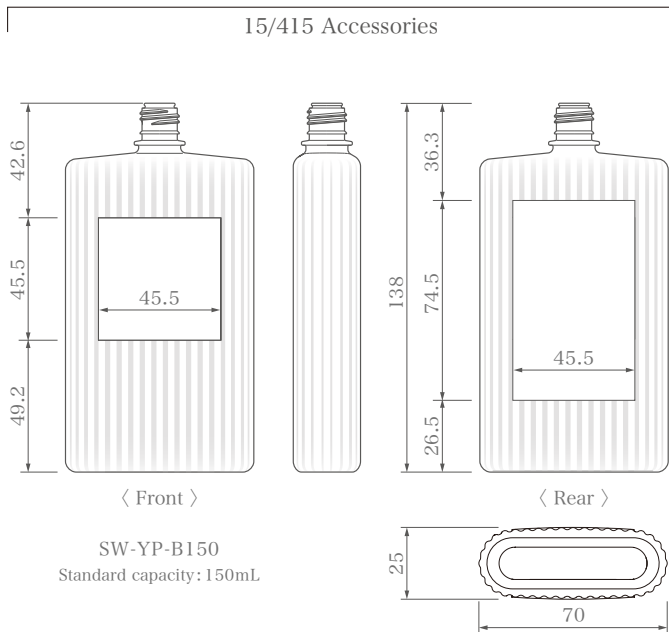

This bottle is made from materials derived from chemical recycling, where collected PET bottles are chemically broken down and then repolymerized. This container is the result of a closed-loop recycling process that does not compromise quality.

On request, the bottle can be made from a biomass material, where the ethylene used to produce the resin is produced with molasses derived from plants such as sugar cane.

The thinnest bottle design*

We have worked to develop a container with a capacity of 150mL and a bottle thickness of just 25mm! This allows for a mail-friendly size, considering the thickness of the outer packaging, and provides an easy-to-squeeze user experience.

* Among our standard PET material containers with a capacity of 150ml or more, this product has the slimmest design

Bottle material : recycle PET / PET+Biomass PET

Molding method: injection stretch blow

* Shrink film and labeling are also possible. Please contact us for details.

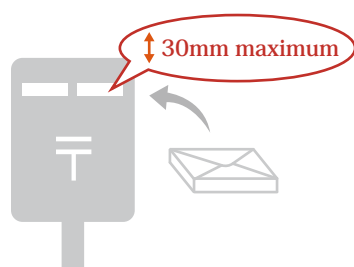

TCS Takemoto Colour Selection

Compatible Component

A selection of a total of 42 colors, including 19 standard colors, 16 matte colors, and 7 gentle nuanced colors are available for PET injection stretch blow molded products. This range of stock colors can shorten the period from product planning to commercialization.

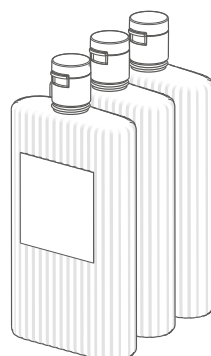

Idea size for postal delivery

We've set the bottle thickness at 25mm, taking into account the thickness of the outer packaging. It has a distinctive presence, can stand on its own and is slim enough to take with you on the go.

Display-friendly design

Space-efficient and easy to display on the shelf.

Easy to squeeze
